NPAV
Password Vault Manager

NP AV

Password manager can be used to store all your passwords and other essential information in a password vault. Password vault is your home & Business base for everything you've saved including passwords, secure notes, Emails, Social media and Banking-credit card password information.

A password vault manager simply allows users to generate complex passwords for online accounts on the spot and store them securely for later use. While most password managers focus on complex methods to ensure security, Net Protector has developed a brand new password management system with a secure End to End Encryption, robust and easy-to-use interface.

NPAV password vault provides various secure and useful options to ensure highest level of security along with a very user friendly interface.

Features of Password Vault Manager

Secured End to End Encryption

To protect against dictionary, brute force, and all the other attacks, we use AES256 bit encryption. The only people who can access the data are the sender and the intended recipient(s).

Secure every Password and Storage

Securely save every password and all of your sensitive data and documents in one secure place for easy of access from any location.

Strong passwords & Share passwords

Net Protector random password generator will create a strong and unique password for each connection and site.
Share password tracking facility, you can easily share passwords with individuals or groups.

Manage access privileges for everyone

Manage access privileges for every user, transfer password ownership and your personal passwords are always yours which can never be accessed by anyone else.

Security auditing

Verify whether your current security strategy is adequate or not. Protects the critical data resources of an organization.

Multi-factor authentication

Create Two-Factor Authentication and add an Email and OTP generator as an extra layer of security.

Regular passwords Backup

Vault sends an encrypted copy of all your passwords to your registered email address or cloud accounts of your choice.
Your backup is as safe as the passwords stored by Net Protector.

Activity Detailed Report

Vault provides customized activity reports to help manage every user's access to critical organization passwords.
Review all password sharing and view all unchanged and frequently accessed passwords.
