# RDP Guard

NPAV RDP Guard is a robust software solution designed to add a solid layer of security to your Remote Desktop Protocol (RDP) connections. It guarantees that your systems are protected against unauthorized access and brute-force attacks. This powerful feature is designed to shield your remote connections with real-time alerts and access control, ensuring your remote desktop connections remain secure and protected.

Key Features of RDP Guard

Remote Desktop Alert Notification

» **Email Notifications**

Receive instant email alerts whenever a remote desktop connection is attempted. Stay informed about every access attempt, whether legitimate or suspicious.

» **WhatsApp Notifications**

Get real-time notifications via WhatsApp for added convenience and quicker response times. Ensure you never miss an alert, no matter where you are.

Approve or Deny Remote Access

» **Access Control**

Easily manage and control remote desktop access to your systems. Approve or deny access requests in real-time, ensuring only authorized users can connect.

» **Enhanced Security**

By actively monitoring and controlling access, NPAV RDP Guard significantly reduces the risk of unauthorized access and potential security breaches.

Improved Security
Protect your systems from unauthorized access attempts with real-time monitoring and alerts

Quick Response
Immediate notifications allow for prompt action, minimizing potential security risks

Convenience
Manage access approvals from anywhere using email and WhatsApp notifications.
