Virus Scan: Useful to clean viruses, worms dialers, Trojans and other malicious activities from mobile device and attached SD card

Schedule Scan: You can Schedule Scan of your device as per your need (Daily / Weekly)

Update

Provides the Latest Updates of various threads database.

Apps Usage

Apps Usage shows the summary of the total time you spend on different app.

Weak Setting Scan

Developer & USB Debugging option in mobile is harmful. Any theft / data leak is possible with permission on your device. This option scans and disables these weak settings.

Anti-theft

his feature captures image of unauthorized user, who is trying to unlock your device. He failed couple of times to unlock it. It also track last location of the device.

Secure QR Scanner

Using this functionality, users can know whether any URL or data contained in the URL is safe or unsafe before opening it.

Motion Alarm

his feature plays alarm, if anyone touches / tries to steal the user's mobile while he is away from device.

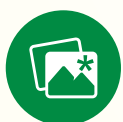

Photo Vault

This feature is used to hide pictures using a password.

Secure Payment

This feature checks if payment app used for payment & Network used is Secure or not.

Lock an App

Using this feature you can lock any app. Any person using same device can not use this locked app without your permission.

Vulnerable Apps

This feature finds the malicious & unverified play store apps. These may be harmful to your device. You can uninstall the malicious apps.

Privacy Control

It is used to check what permissions are used by apps installed on your device. Some malicious apps take unnecessary permissions that which are not needed. This may cause data leak or spying of your device.

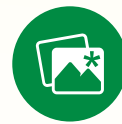

My Account

If a user enables this option, all the hardware and software-related details of all the devices associated with the same user will be available in the same place on the cloud.

System Information

This feature lists hardware and software available in your device.

Duplicate File Fixer

It finds all the file that appears more than once on the device and provides the option to clear multiple appearances of type of file. It is also categorized on the basis of file types. Users are often able to find such files, but it captures memory unnecessarily.

App Manager

This feature lists all apps installed by users with the app size, installation date. Users can search, share, uninstall the specific app to optimize memory.
